Iteration Project

Focus on clean code

- Gain sentiment for how it feels to work with legacy code

- Is there a README.md to describe what project is and how to setup it up?

- **Refactor** the code

Write Tests

- Project is large enough that you may break things unintentionally while add features

- Testing catches these errors quickly

- **Required** to add units tests
  (More covered in testing module)

Add new feature

Make it fun!

Due End of Thursday
